DETAILED ACTION

Specification

Claims 22 and 34 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from a multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims 22 and 34 have not been further treated on the merits.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-21, 23-33 and 35-56 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yamada et al in view of Taniguchi and Moriyama et al.

Re Clms 1,2,5-9,11,12,15-19,22,23,24,27-31,34:Yamada et al discloses a lens on which a titanium oxide film is provided (Yamada et al Fig 1) for use in reduction projection aligner systems such as excimer laser reduction projection aligners. However, Yamanda et al does not disclose the claimed structure of the aligner system or disclose a supporting unit in a projection aligner system being coated with titanium.

Art Unit: 2851

Taniguchi discloses an illuminator for illuminating an object with a luminous flux emitted from a light source, the illuminator comprising: an illumination system through which the luminous flux is projected onto the object (Taniguchi Fig 1) and Moriyama et al discloses a supporting unit coated with titanium for use in a projection aligner system which improves performance of the aligner. Therefore, it would have been obvious to a person of ordinary skill in the projection art at the time the invention was made to place the titanium coated lens of Yamada et al in the aligner system of Taniguchi and

FIG. 1

Moriyama by substituting the supporting unit coated with titanium of Moriyama et al in the projection aligner of Taniguchi because it improves performance of the aligner system as suggested by Yamada et al (Yamada et al Col 1).

FIG. 1

Response to Arguments

Applicant's arguments with respect to claims 1-56 have been considered but are moot in view of the new ground(s) of rejection.
